PROFESSIONAL SUMMARY

M.Sc. Digital Engineering (Core AI & Computer Science), Bauhaus-Universität Weimar, with 7+ years of professional experience spanning AI/ML engineering, data engineering, technical support, and product management. Built and scaled language models from scratch, a Retrieval-Augmented Generation chatbot, and a custom Claude Code connector using the Model Context Protocol. Owned ETL pipelines, wrote complex PL/SQL, and automated data validation across enterprise systems at TCS. Used Azure AI Services, AWS Bedrock, and Microsoft Copilot professionally, and hold a SAP Generative AI Developer certification alongside two AWS certifications in Generative AI and AI Agents. Worked closely with Product Managers on feature prioritisation, use case documentation, and competitor analysis, and presented insights directly to senior leadership. Comfortable moving between hands-on model building, data engineering, and cross-functional product work.

TECHNICAL SKILLS

Programming:	Python, SQL, PL/SQL, C# (basic), Bash/Shell/Linux, Git, JavaScript/TypeScript (coursework)
AI & ML:	PyTorch, TensorFlow, Scikit-learn, NumPy, Pandas, LangChain, FAISS, RAG Pipelines, Prompt Engineering, Embeddings, Agentic AI, Claude Code, MCP, Model Evaluation
Cloud & MLOps:	AWS Bedrock, Azure OpenAI, Azure AI Studio, Cognitive Services, Docker, GitHub Actions/CI-CD, Databricks (PySpark context), Azure DevOps
Data & Pipelines:	Snowflake, Informatica ETL, Power BI, QlikSense, Datadog, Data Modelling, Data Quality, Reconciliation, Root Cause Analysis
APIs & Automation:	REST APIs, FastAPI, Webhooks, n8n, Zapier, Make, Power Automate, Microsoft Copilot
Business Tools:	JIRA, ServiceNow, Confluence, SharePoint, Miro, HubSpot, Salesforce, Zoho CRM, Microsoft 365
Methods:	Agile/Scrum, User Stories, Use Case Documentation, Stakeholder Requirement Analysis, Competitor & Pricing Analysis, Feature Prioritisation

PROJECTS

Building LM Models (Master's Research Project)

Technologies: Python, PyTorch, Fine-tuning, FFNN, RNN, Transformers, Optimizations

Built and scaled next-word prediction language models from scratch, covering data preprocessing, tokenisation, model training, and architecture optimisation

RAG-Based Customer Support Chatbot (ZoomInfo)

Technologies: Python, LangChain, FAISS, LLM APIs, Embeddings, REST APIs

- Built a Retrieval-Augmented Generation chatbot to answer customer product queries, using FAISS for vector storage and LangChain to orchestrate retrieval and response generation
- Placed second at an internal hackathon

Custom Claude Code Connector (Personal Project)

Technologies: Claude Code, MCP (Model Context Protocol), API Integrations

Built a custom connector using the Model Context Protocol to wire an AI agent into an external tool end to end

Autoencoder for Image Anomaly Detection (Mini-project)

Technologies: Python, PyTorch, NumPy, Pandas, Computer Vision

Built an autoencoder to detect anomalies in image data, tuning network architecture to balance reconstruction accuracy against sensitivity

AI Prompt Playbook (ZoomInfo University)

Technologies: Generative AI, Prompt Engineering, Learning Content Design

- Designed and published a structured 40-minute AI learning course across six lessons for sales and marketing teams
- Enrolment, completion, and engagement tracked and shared with stakeholders; recommended to customers by the onboarding team

Workflow Automation with n8n (Personal Project)

Technologies: n8n, Zapier, Make, Webhooks

Built and tested automated workflows connecting different tools and triggers to remove manual steps from repetitive tasks

CERTIFICATIONS

SAP Certified Associate - Generative AI Developer (C_AIG)	2026
SAP	
AWS Generative AI and AI Agents with Amazon Bedrock Professional Certificate	2026

Amazon Web Services (AWS) via Coursera	
AWS Artificial Intelligence Practitioner	2026
Amazon Web Services (AWS) via Coursera	
Product Management Career Accelerator Program	2023
GrowthSchool.io	

EDUCATION

M.Sc. Digital Engineering (Core AI & Computer Science), Bauhaus-Universität Weimar	Oct 2024 – Present
Weimar, Thüringia, Germany	
• 4th semester (SuSe 2026)	
B.Tech Civil Engineering, Sri Manakula Vinayagar Engineering College	2013 – 2017
Puducherry, India	

PROFESSIONAL EXPERIENCE

Technical Support Engineer, ZoomInfo	Apr 2022 – Sep 2024
Chennai, India	
- Used Python and SQL as the main tech stack for triaging and reproducing customer-reported bugs, and building internal diagnostic queries - Used Databricks notebooks (with PySpark in context) and wrote Snowflake queries for deeper data analysis and diagnostics - Used webhooks and REST APIs to connect data flows between HubSpot, Slack, and Notion, removing manual steps from cross-team workflows - Built automation workflows using n8n and Power Automate to remove manual steps from repetitive tasks - Maintained 99.7% SLA compliance, highest in the product support vertical - Worked with senior engineering managers and Product Managers on feature prioritisation, translating requirements into structured use case documents - Conducted competitor analysis on specific feature and pricing performance, and presented product usage insights and market intelligence to senior leadership - Conducted structured testing and UAT for product releases, formulating test cases ahead of rollout - Took ownership of backlog refinement and team workshops in an Agile/Scrum environment - Took meeting minutes and follow-ups for cross-functional meetings, and set up and maintained SharePoint pages - Used PostHog, Metabase, and customer.io to track user behaviour and feature performance over time	
Senior Inside Sales Specialist, Simplilearn	Jan 2022 – Mar 2022
Bangalore, India	
Tracked B2B sales performance using Power BI dashboards and Excel; consistently achieved 120% of quota	
Business Development Associate, BYJU'S	Feb 2021 – Dec 2021
Bangalore, India	
B2C sales achieving 135% quota attainment; mentored and onboarded new hires	
Senior System Engineer, TATA Consultancy Services	Oct 2017 – Jan 2021
Chennai, India	
- Owned ETL pipelines built on Informatica and Azure Data Factory, managing end-to-end data workflows across enterprise systems - Wrote complex PL/SQL, including DDL, DML, cursors, triggers, and stored procedures, to keep enterprise data structured and reliable - Automated data validation and reporting workflows end-to-end using Python - Managed BI systems (QlikSense) for end-to-end data workflows and prepared operational KPI reports - Monitored production systems with Datadog, leading root-cause analysis and incident resolution - Supported client-facing, consulting-style engagements under the TCS delivery model - Coordinated with software and tool vendors on issue resolution, upgrades, and support tickets - Documented enterprise processes and requirements across global, cross-functional teams - Maintained master data and configuration records in a core business system
